

DEFPRO / K9-BAG

Dog Equipment for Protection (DEFPRO)

Height	35 cm
Width	45 cm
Length	90 cm
Weight	3,9 kg
Color	Black
Working temp.	-30 to +50 celcius
ISO	9001:2015

Developed by Norwegian Defence Research Establishment (FFI) together with the NOR SOF. This special designed bag protects the K9/service dog during static- and free-fall parachuting (Hi-Lo) and other operations in harsh enviroments.

There is also a Molle-system mounted on large parts of the bag. After rapping the bag around the dog, it is safely protected against impacts and low temperatures.

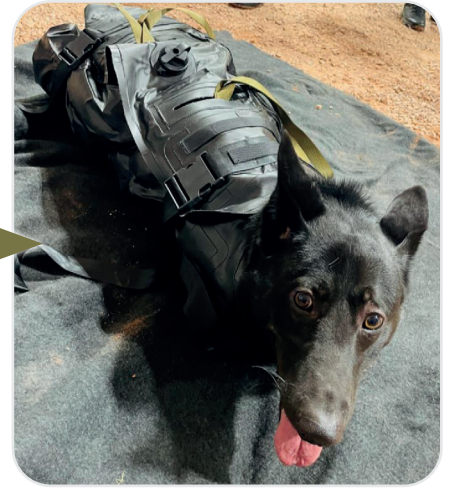

- Used for service- and rescue dogs during parachuting, CQB, rappelling, rough transportation/handling.
- The service dog use the loops in their harness to thread through the bag and attach to operator or rope.
- The bag establishes a hard and protective shield for the dog inside, by using a vacuum-pump.
- The protection bag is made of flame- and water resistant and PVC-material, which keeps the dog isolated and warm.
- Can be customized with different fastening devices adapted to customers needs.
- In use since 2016, and produced in Sweden, hand made by AB Germa.
- The bag is "one-size-fits-all" service dogs

WRAP BAG AROUND DOG AND USE THE LOOP ON THE HARNESS TO FASTEN TO OPERATOR.

USE HANDPUMP TO VACUUM THE BAG.

THE BAG IS NOW A «PROTECTIVE SHIELD» FOR THE DOG.
